Main Features

- **Develop once** in RPG or Cobol, run from your Smartphone, Tablet, PC, Mac...
 - Support all **iOS** and **Android** mobile devices,
 - For **all Internet browsers** like Windows 10 Edge, Internet Explorer, Safari, Chrome, Firefox...
 - **Without any development** for the mobile application.
-
- Use **all the local services** of your mobile, like the address book, the camera, the GPS location... with the « SP4i-V2 » application. (available on iTunes and Google Play),
 - Develop your applications with your **actual skills**, re-use all existing business logic modules,
 - Replace **DDS by HTML** and use all existing HTML components like images, links, check boxes...without any limit for the number of lines and columns displayed,
 - Use all **IBM i languages**, and especially now ILE RPG Free Form,
 - Access your data with **SQL** or **native access**,
 - **Fast development** by generation of about 80% of lines of programs,
 - **Test and debug** your applications with your PC as today with all existing IBM i tools,
 - Use a **web application server** like Tomcat, Liberty or WebSphere to manage peak loads, resource allocations, load balancing...
 - Download your data on your mobile and use the “**off-line**” feature of the application to let your users work without any Internet connection. Update your data, create new records, delete existing records **without any development** for the IBM i and for your mobile application,
 - **Customize** the Mobile Application with your name, your logo... and use it with your own private store with **IBM Maas360**.
-
- **Demonstration** are available from SystemObjects and at the **IBM Client Demonstration Center** in Montpellier (France),
 - Free trial version is available at <http://www.systemobjects.com/homesp4i.html>
